

STORAGE VISIONS® 2015

January 4 & 5, 2015 at The Riviera, Las Vegas, NV

AN ENTERTAINMENT STORAGE ALLIANCE™ EVENT

Hossein ZiaShakeri – Senior Vice President, Strategic Marketing and Business Development, Spectra Logic

TITLE

The Objects of Archiving

ABSTRACT

As the amount of stored content increasing at an accelerating rate, protecting and preserving this content requires effective, fail resistant and enormously scalable storage. Object based storage has emerged as a way to build enduring storage systems that can scale to billions of objects and enormous storage capacities while maintaining acceptable latencies for data access. This talk will talk about the extension of object storage into magnetic tape archives that will enable 100 year archive solutions while providing long-tail content access support.

BIOGRAPHY

A key associate since 1984 and the former vice president of advanced engineering, ZiaShakeri was named senior vice president of business development and alliances in 2004 to help maintain the company's leadership position in product innovation and business success.

ZiaShakeri has more than 20 years experience in digital and analog hardware design; firmware/software development; and design engineering and management of storage subsystems. He currently leads Spectra's vertical initiatives, including media & entertainment.

ZiaShakeri earned a bachelor's of science degree in electrical engineering from Georgia Southern University in 1982.
