

Brett Cameron, Director, SCSI Trade Association

TITLE

Storage Standards

ABSTRACT

As more media professionals in networked production environments rely on shared storage solutions that have transformed production facilities everywhere, Serial Attached Storage (SAS) technology is more prevalent than ever before. This talk will include an up-to-the-minute recap of the latest additions to the SAS standard and roadmaps. The speaker will discuss how 12Gb/s SAS is in full swing, helping to open new applications such as content creation and the broader media & entertainment market. He will also focus on areas of enhanced connectivity solutions, MultiLink SAS and new features such as Storage Intelligence, Zoned Block Commands (ZBC) and atomic writes for shingled magnetic recording. Attendees will also receive the latest updates on the status of 24Gb/s development.
