

Ercan Erciyes, CEO, Monument Labs, Inc.

TITLE

Lessons Learned from Bringing AI to consumer storage devices

ABSTRACT

The overall benefits of implementing Artificial Intelligence is an increasingly beneficial feature for many products. However, how to best implement this technology is less obvious. In the case of Monument, personal cloud storage system for photos, the computer vision processing implemented within the device. Such an approach is also often referred to as processing that the edge. We'll highlight our company's recent research on this topic including challenges we faced. The presentation will also cover alternative approaches, additional system architectures, and other techniques to help creators to implement this technology in their products.

BIOGRAPHY

Ercan is the co-founder of Monument Labs; makers of an Artificial Intelligence enabled, scalable, effortless storage system the entire family can use to store, organize and view photos in one place. Monument raised over \$900k from pre-orders; making it one of the TOP funded crowdfunding projects in technology.
