

STORAGE VISIONS® 2018

October 22-23, 2018 at the Hyatt Regency, Santa Clara, CA

AN ENTERTAINMENT STORAGE ALLIANCE™ EVENT

Hans O'Sullivan, CEO, StorMagic

TITLE

Why Edge is Thriving in the Datacenter Apocalypse

ABSTRACT

The modern data center is taking on an “edgy” new definition as more data is being generated outside of the traditional datacenter than ever before. In fact, Gartner predicts that by 2025, 80 percent of enterprises will have shut down their traditional datacenter, versus 10 percent today*. Organizations can't afford to send all types of data back to a datacenter or public cloud given the lightweight, cost-effective methods available at multiple locations with edge computing. Being able to manage, process and classify data right where it's being created offers multiple benefits not previously available in the IT landscape.

Attendees will learn:

- The definition of edge computing environments: are you edge ready?
- How the future of storage will see a boost in edge computing, which will displace many traditional primary datacenters.
- Cost, time and efficiency improvements your organization will realize with software-defined, edge-based solutions.

BIOGRAPHY

Over his more than 30 years in leadership roles in the technology industry, Hans has accumulated vast experience in the IP-based storage and protocols industry and has 7 patents to his name. Before co-founding StorMagic in 2006, he spent many years as CTO at leading IP storage company Eurologic (a leading supplier of storage platforms to companies such as Network Appliance, Dell, Fujitsu Siemens and Avid) and became CEO at Elipsan when it was spun off from Eurologic in 2003.
